VITAL STATISTICS AND POPULATION ESTIMATES
SEPTEMBER QUARTER 2019

Population Estimates

Cook Islands Population was estimated at 20,700 for September Quarter 2019, increasing by 2.5 percent over June quarter 2019 (20,200). Resident population estimate stood at 17,700.

Births

Registered births totaled to 64 for September quarter 2019, decreasing by 1.5 percent over the June quarter 2019 (65 births). This is an average of five births per week. The number of births to women aged 25-20 (22 births) showed the highest for September quarter 2019, followed by women aged 20-29 (17 births).

Deaths

Total number of deaths recorded stood at 34 deaths (averaging to 3 deaths per week) increasing by 47.8 percent when compared to previous quarter June 2019 (23 deaths).

Crude rates

The total crude birth rates (births per 1,000 populations) have decreased by 3.6 averaging to three births to every thousand population. The total crude death rate for the September quarter 2019 was estimated at 1.9 per thousand populations.

Infant mortality rate

Infant mortality rate (deaths to under 1 year age per 1,000 live births) increased to 15.6 for September quarter 2019. In real numbers there was 1 infant death in the September quarter 2019.

Marriages

The total number of marriages officiated in the Cook Islands for the September quarter 2019 was 163 (averaging to 14 marriages per week). This is a 10.9 percent increase when compared to the June quarter 2019. Of these marriages, about 90.8 percent were non-residents and 9.2 percent were Cook Island residents.

Further information about this release can be obtained from the Statistics Office.

Explanatory Notes

Introduction

The Population and Vital Statistics reports on the total and resident population estimate base on vital events of birth and deaths plus net migration data derived from tourism migration data. It also reports on the various vital events such as births, deaths and marriages that occurred within the Cook Islands. Some basic demographic crude rates such as for birth, death and infants deaths including natural increase are also reported in this release.

Computation of Crude Rates

Crude rates of birth, death and infant deaths are also compiled from these events.

The formula used in computing these rates are as follows:

$$\text{Crude Birth Rate} = \text{Total Births} / \text{Total Resident Population} * 1,000$$

$$\text{Crude Death Rate} = \text{Total Deaths} / \text{Total Resident Population} * 1,000$$

$$\text{Infant Mortality Rates} = \text{Total Infant Deaths} / \text{Total Births} * 1,000$$

$$\text{Natural Increase} = \text{Total Crude Birth Rate} \text{ less } \text{Crude Death Rate}$$

Data Source

The records of births, deaths and marriages are compiled from the records of the Births, Deaths and Marriages Registrar of the Ministry of Justice. For the islands outside of Rarotonga, the Deputy Registrars of each island furnish these records directly to the Cook Islands Statistics Office.

Coverage

All records are compiled for each inhabited island of the Cook Islands and are tabulated by the date of occurrence of the event. Often these records are reconciled with the Ministry of Health (MOH) records to ascertain the compilation of one indicator for the Cook Islands.

Note : ⁽¹⁾ Mid year population estimated at June Quarter

⁽²⁾ Crude birth rate and crude death rate are calculated per thousand Resident Population as of 1992

⁽³⁾ Infant mortality rate is calculated per thousand births

⁽⁴⁾ Resident population comprises only those normally resident in the Cook Islands Birth, death and migration were sources used to estimate the population. Prior to 1992, migration data was not disaggregated
