VITAL STATISTICS AND POPULATION ESTIMATES
SEPTEMBER QUARTER 2017

Population Estimates

Cook Islands Total Population estimate for September quarter 2017 was 19,400 showing a decrease of 0.5% when compared to June quarter 2017. Resident population is currently estimated at 15,700 for June 2017 quarter. This is 0.6% (100 people) more when compared to June quarter 2017.

Births

Total births recorded for this quarter was 57, a slight decrease of 5.0% (3 births) when compared to previous quarter (60 births). This averages to 5 births per week. The number of births to women aged 25-29 (21 births) showed the highest for September quarter 2017, followed by women aged 30-34 (13 births).

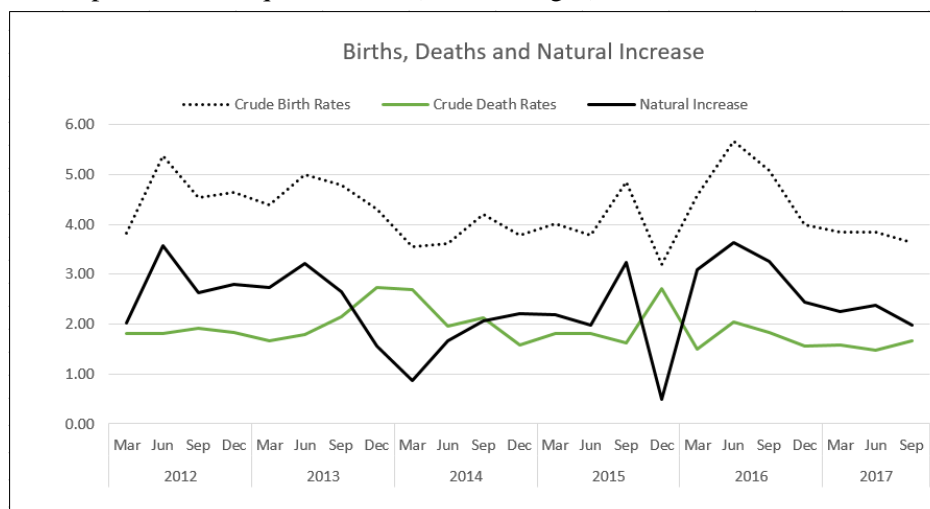

The quarterly crude birth rate (number of births per 1000 population) stood at 3.6, giving an average of 4 children born to every thousand population.

Deaths

Total number of deaths recorded for September quarter 2017 was 26 an average of two deaths per week, showing an increase of 13.0 % (3 deaths) when compared to June quarter 2017 (23 deaths). The crude death rate stood at 1.7, this means two death to every thousand population. There were no infant death registered for this quarter.

Marriages

Total marriages officiated for September quarter 2017 was 212 showing an increase of 21.8% (38 marriages) when compared to June quarter 2017 (174 marriages).

Further information about this release can be obtained from the Statistics Office.

Explanatory Notes

Introduction

The Population and Vital Statistics reports on the total and resident population estimate base on vital events of birth and deaths plus net migration data derived from tourism migration data. It also reports on the various vital events such as births, deaths and marriages that occurred within the Cook Islands. Some basic demographic crude rates such as for birth, death and infants deaths including natural increase are also reported in this release.

Computation of Crude Rates

Crude rates of birth, death and infant deaths are also compiled from these events.

The formula used in computing these rates are as follows:

$$\text{Crude Birth Rate} = \text{Total Births} / \text{Total Resident Population} * 1,000$$

$$\text{Crude Death Rate} = \text{Total Deaths} / \text{Total Resident Population} * 1,000$$

$$\text{Infant Mortality Rates} = \text{Total Infant Deaths} / \text{Total Births} * 1,000$$

$$\text{Natural Increase} = \text{Total Crude Birth Rate} \text{ less } \text{Crude Death Rate}$$

Data Source

The records of births, deaths and marriages are compiled from the records of the Births, Deaths and Marriages Registrar of the Ministry of Justice. For the islands outside of Rarotonga, the Deputy Registrars of each island furnish these records directly to the Cook Islands Statistics Office.

Coverage

All records are compiled for each inhabited island of the Cook Islands and are tabulated by the date of occurrence of the event. Often these records are reconciled with the Ministry of Health (MOH) records to ascertain the compilation of one indicator for the Cook Islands.

Note : ⁽¹⁾ Mid year population estimated at June Quarter

⁽²⁾ Crude birth rate and crude death rate are calculated per thousand Resident Population as of 1992

⁽³⁾ Infant mortality rate is calculated per thousand births

⁽⁴⁾ Resident population comprises only those usually resident in the Cook Islands
